Founder
 Confidential consulting work with major online poker sites to develop automated systems to detect the use of AIs and other forms of cheating.
- Fall 2010** **Cake Gaming**
Independent Security Investigator
 Created and employed algorithms to search through eighty million poker hands to determine if anyone exploited an encryption vulnerability on Cake Poker. This was by far the largest independent security audit of an online poker website conducted at the time. Our methods were novel, and we proved their efficacy by designing poker AIs (including subtly cheating AIs) to test them.
- 2006-2011** **Professional poker player**
